ALUMINIUM RAIL

> *by Goelst*

**G-Rail series 6000 electrically operated curtain tracks with 'built-in' CAN-BUS switching** allows for stand alone programming and control or integration with most Home Automation systems. Infrared remote control is supplied as standard with all 6000 series electrically operated curtain tracks. Optional manual switching and wireless radio control (RF) are available allowing multi-control options.

## CONNECT AND CONTROL

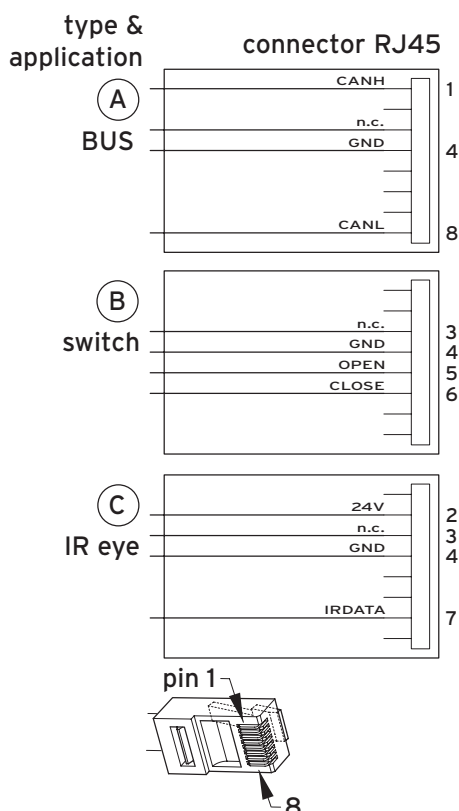

# 6000-SERIES

# Control of G-Rail series 6000 > electrically operated curtain tracks.

### Connecting the G-Rail CAN-BUS system.

#### pin connections A, B and C

#### properties of electrically operated curtain rail

- > standard infrared control: 3 bands each with 5 channels (total 15 channels), remain adjustable after installation.
- > In the event of a power cut, the Infrared channels and key positions in the motor unit will be retained.
- > motor speed settings and CAN-BUS facilities factory-set by Goelst.

#### properties of G-Rail CAN-BUS

- > The switching current is +/- 5,5mA.
- > press and hold more than 1,2 sec: the system runs until button is released.
- > pulse under 1,2 sec: - automatic complete open/close/stop.
- > When activated together, open and close buttons will switch the motor unit to program mode.
- > Potential free switching only
- > 24V DC output - pin2 and pin4: max. 2,4VA
- > Bounce time lower than 0,04 sec required.
- > Pins 1 & 8 should not be used.

**Examples of standard configurations using infrared control or switches.**

- > All motor units supplied with 24V transformers (not shown)
- > Including: RJ45 pin connections A (BUS), B (switch) & C (IR).
- > Examples valid for all 6000-series motors

**Example 1:** Standard motor unit for system 6200 (Tandem version includes 1 extra motor unit to include 15m BUS cable)

**Example 2:** two unconnected systems, using one infrared transmitter and two infrared receivers (single IR receiver 6040-2100 included in set option 6200-00).

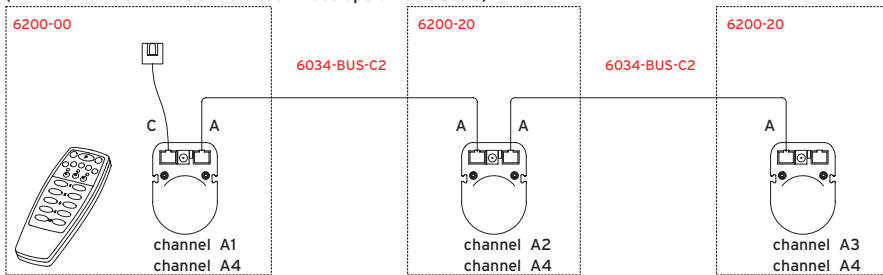

**Example 3:** two connected systems with BUS cable: with one infrared receiver for control of both systems (IR receiver 6040-2100, included in set option 6200-00)

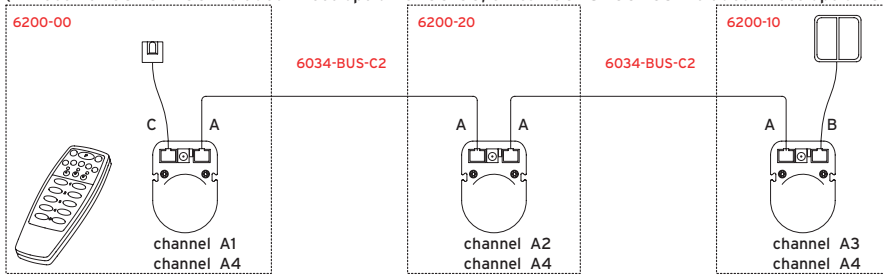

maximum 32 motor units can be connected using BUS cable format.

**Example 4:** One infrared receiver to operate three systems either individually or by group. (IR receiver 6040-2100 included in set option 6200-00)

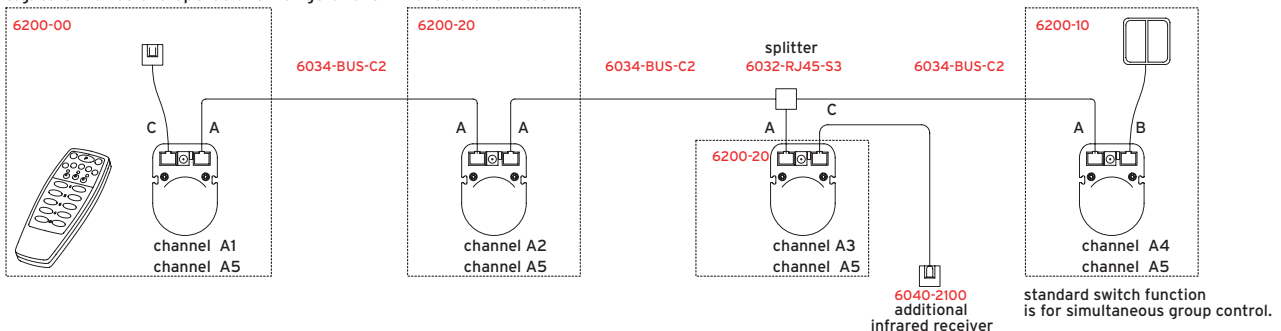

**Example 5:** Single infrared receiver operating three systems individually or by group. Also including single switch for manual group operation. (IR receiver 6040-2100 included in set option 6200-00, switch 6048-1001-03 included in set option 6200-10).

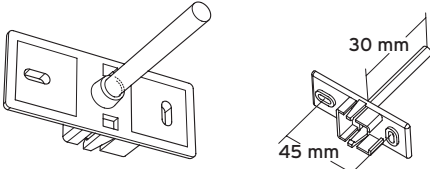

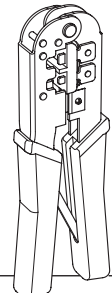

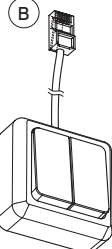

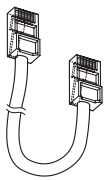

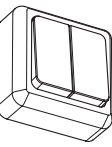

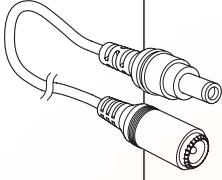

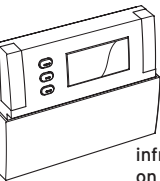

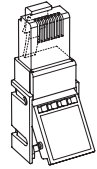

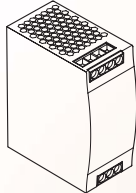

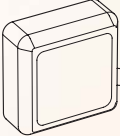

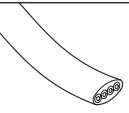

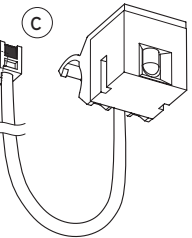

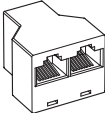

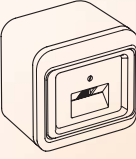

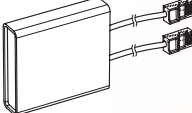

standard switch function is for simultaneous group control.

**Example 6:** In larger system layouts, an extra infrared receiver can be inserted as shown in motor unit 3, e.g. to enhance the operational range of the infrared transmitter.
